

BABY BRAIN DEVELOPMENT PROGRAMME

CANRIDGE RIGHT BRAIN DEVELOPMENT CENTRE

Where Learning Is As Natural As Playing

There may be scores of brain development methods offered nationwide today for babies and toddlers, but few can come close to the fun and effective programmes created especially for little ones at Canridge Right Brain Development Centre. The programme consists of four main components that work hand in hand to stimulate better learning capabilities in young, developing brains. They are Flashcards, Playgym, Music and Art. The Flashcard session, when carried at a young age, sharpens the senses of sight and hearing while improving the concentration and attention span of little ones, where else Playgym is fun-filled with lots of opportunities to learn about self-control and discipline while they hone their motor skills and hand-eye coordination. Music class provides them the opportunity to connect with other children through songs and music, while enriching their vocabulary, memory power and concentration when playing musical instruments. Arts class is where they'll get to explore their creativity and at the same time, fine tune their sensory development using their five senses - and make all the mess they want as long as they're happy!
